

Shadow bundle opportunity analysis

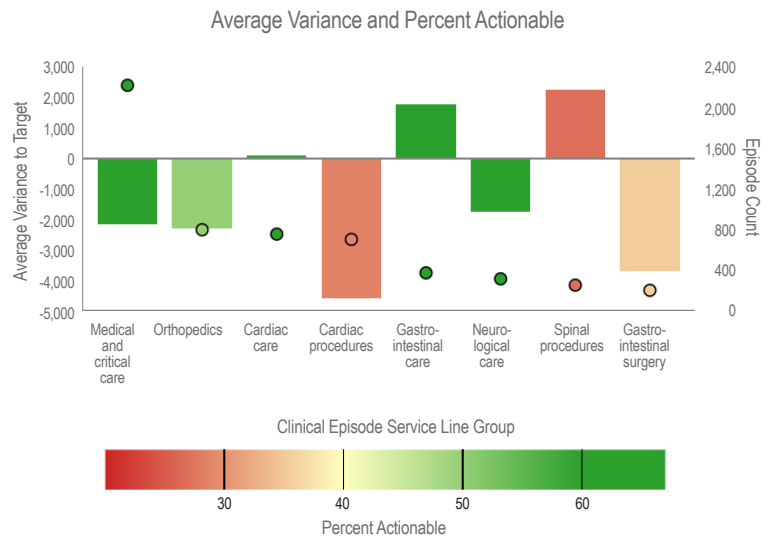

Alternative Payment Model Analysis™

Supercharge your analytics to effectively meet your clinical, quality and financial goals

- » Understand key metrics across clinical episodes.
- » Identify patterns in utilization and episode spend compared to benchmarks.
- » Conduct what-if analyses to identify opportunities to reduce episode spend.

DataGen®, Inc. helps providers nationwide better understand the impact of healthcare trends, assess risk and drive improvement, offering key insights and consultations to hospital, health system, post-acute and other healthcare providers.

Shadow bundle overview

Shadow bundles are episodes of care constructed for an aligned or attributed beneficiary population in an Accountable Care Organization or Clinically Integrated Network.

ACOs in the Medicare Shared Savings Program and Realizing Equity, Access and Community Health Model now receive monthly shadow bundle data for all attributed beneficiaries, modeled after the

Bundled Payments for Care Improvement Advanced Model specifications.

Shadow bundle data help ACOs and CINs assess opportunity through the lens of medical and surgical episodes of care (as shown for clinical episode category service line groups in the chart), and can help facilitate stronger engagement with specialty care partners.

CONTACT DATAGEN TODAY to learn more about our ACO solution and shadow bundle opportunity analysis.
