State Your Case: 5 Top Reasons You Need Automated SPARCS Data

Get buy-in for DataGen's UDS (UIS Data System™) solution

“The amount of time we spend on SPARCS reports has decreased from two weeks to 15 minutes!”

Antony Chang, MBA
Director, Information Technology, Gramercy Surgery

There could still be room in your organization's budget to access DataGen's UDS solution. If you're a coder or HIM director trying to get higher-ups on board, here are five key points to convince your boss to sign on to an automated Statewide Planning and Research Cooperative System data submission tool.

Achieve the highest levels of accuracy and compliance with a singular platform. Automatically edit and report all inpatient, ambulatory surgery, emergency department and clinic activity data. Cut down on costly errors while staying compliant with New York state legislation.

Never let SPARCS formatting, editing and submitting eat up your time and resources again. Our software includes the most up-to-date codes, so you'll never have to worry about thousands of added and deleted ICD-10 codes, daily FDA National Drug Code and random updates. This allows you to significantly reduce or eliminate costly rejections.

The workforce shortage has put a lot of pressure on the healthcare industry. For those looking for extra support, **DataGen's UDS solution** automates the SPARCS entry, correction and formatting process. Eliminate or significantly reduce rejections to gain workforce efficiencies and free up staff time.

DataGen's UDS solution doesn't require installing hardware or special software, only a browser. We securely store all the data so that your integration is seamless.

Streamline complex workflows that make it hard to manage and monitor the SPARCS submission process. Access a comprehensive platform trusted by more than 130 hospitals and ambulatory surgery centers in New York state. Take the burden of time-consuming errors and state-mandated fines off your employees for good.
