

Why hospitals should use simulated TEAM episodes of care

3 Key benefits that help hospitals under mandatory TEAM participation

Success in the CMS Transforming Episode Accountability Model (TEAM) relies on effective provider collaboration across specialties and the care continuum. DataGen's TEAM solutions allow providers to leverage simulated TEAM episodes of care data, helping them align care delivery, minimize fragmentation and achieve unified patient outcomes.

1 Test financial impact

- Simulate TEAM models to predict financial performance under different risk tracks.
- Use historic data to uncover episode expenditures and resource utilization.
- Identify areas to improve care coordination and reduce costs.

2 Gain a competitive edge

- Use benchmarks to compare your care patterns to the market.
- Analyze key episode influencers like post-acute settings, length of stay, readmissions and home health visits.
- Run “what-if” scenarios to align with TEAM’s financial goals.

3 Optimize care coordination

- Identify gaps in care during the post-discharge period.
- Refine care pathways to deliver quality outcomes throughout the patient episode.
- Use targeted strategies to meet TEAM’s quality and coordination requirements.

Prepare your hospital for TEAM success

Simulated TEAM episodes empower you with actionable insights to align care, improve outcomes and meet new CMS requirements. Explore DataGen's TEAM solutions today!
